B1 Chapter 5 Biomass Higher tier		Class:		
Author:				
Date:				
Time:	102			
Marks:	102			

Q1. The diagram below shows a food web for some of the organisms which live in a pond.

You may need to use information from the food web to help you to answer the following questions.

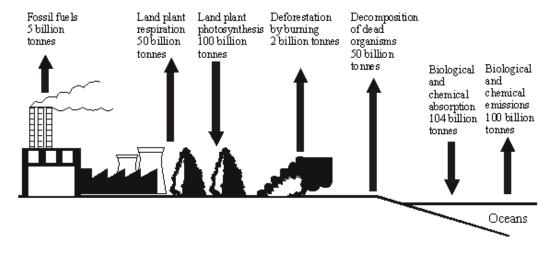

(a) The algae photosynthesise. Complete the equation for photosynthesis.

(2)

(b)	Only a small percentage of the Sun's energy captured by the algae is eventually incorporated into the body tissues of the stickleback. Explain, as fully as you can happens to the rest of the energy captured by the algae.	n, what
		 (8) (Total 10 marks)

Q2. The diagram below shows the mass of carbon involved each year in some of the processes in the carbon cycle.

	+ oxygen → carbon dioxide + energy	(2
(i)	Calculate the mass of carbon removed from the atmosphere each year. (Show your working.)	
	Answer billion tonnes	(1
(ii)	Calculate the percentage of this total which is removed by the photosynthesis of land plants. (Show your working.)	
	Answer %	(2)
(iii)	Calculate the net gain of carbon by the atmosphere in one year. (Show your working.)	

Answer billion tonnes
(2)
(Total 7 marks)

- Q3. A gardener pulled up weeds and used them to start a compost heap. The compost heap soon became colonised by large numbers of earthworms and slugs. The gardener then noticed a hedgehog rooting through the compost heap, eating the earthworms and slugs. Every so often the hedgehog stopped to scratch itself. This was because it had large numbers of fleas which fed by sucking the hedgehog's blood.
 - (a) Use **only** information from the passage to answer the following.

Construct and label a pyramid of **biomass** for your food chain.

(b)	Gardeners put plant material onto compost heaps so that it will decay. They then put the decayed compost onto soil where they are growing their plants.			
	Give three conditions which are needed for plant material to decay rapidly.			
	1			
	2			
	3	(3) (Total 5 marks)

Blue tit

© Marcobarone/iStock

Coal tit

© MikeLane45/iStock

(a)

© Andrew Howe/iStock

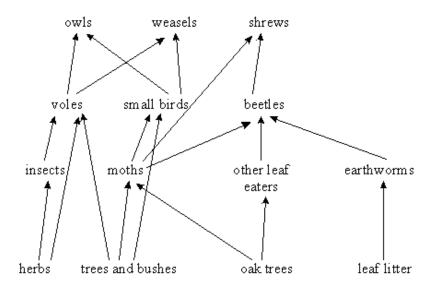

The table gives information about the four species of bird in winter.

Bird species	Mean body mass in grams	Mean energy needed in kJ per day	Mean percentage of day spent feeding
Great tit	21	84.2	75
Blue tit	12	62.4	81
Coal tit	9	49.5	88
Lond-tailed tit	7	42.0	92

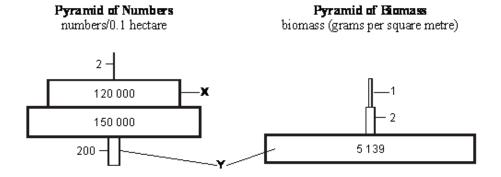

(i)	Calculate the energy needed per day per gram of body mass for the blue tit.	
	Answer =kJ per day per gram of body mass	(2)
(ii)	Describe the trend for energy needed per day per gram of body mass for the four species of bird.	(-)
		(1)

	(iii)	Suggest an explanation for the trend you have described in part (a)(ii).	
			(2)
(b)		cribe and explain the trend shown by the data for the time spent feeding in winter for birds.	
			(2)
		(Total 7 ma	

Q5. The diagram below shows a food web for a wood.

(a) The diagrams below show a pyramid of the numbers and a pyramid of the biomass for 0.1 hectare of this wood.

(i)	Name one organism from the level labelled X.	(
(ii)	Explain, as fully as you can, why the level labelled Y is such a different width it two pyramids.	
Expl capt	ain, as fully as you can, what eventually happens to energy from the sun which ured by the plants in the wood.	is
		(1 otal 14 mark

Q6. An oak wood contained the following:

200 oak trees

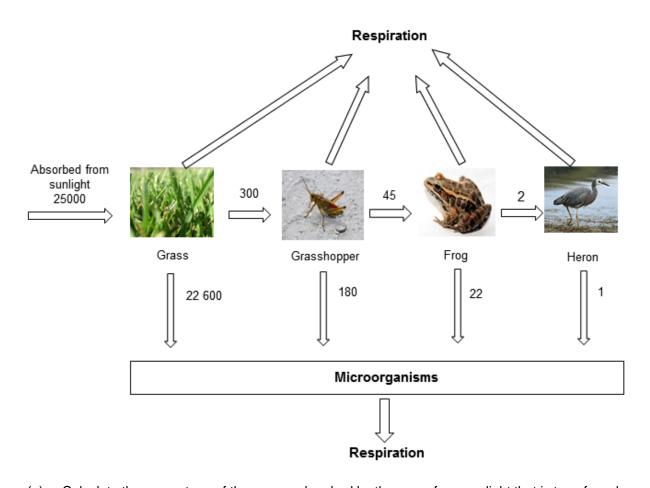

150 000 primary consumers

		100 000 primary	Consumsto	
		120 000 seconda	iry consumers	
(a)		w and label a pyramid of biomass for thi syn to scale.)	s wood. (Your pyramid does not have to be	(2)
(b)	A so		ergy flow through each level of the pyramid per	
	The	results were:		
	Enei	rgy absorbed by oak trees	4 600 000 kJ per m² per year	
	Enei	rgy in sugar produced by trees	44 000 kJ per m² per year	
	Ene	rgy transferred to primary consumers	2 920 kJ per m² per year	
	Ene	rgy transferred to secondary consumers	700 kJ per m² per year	
	(i)	Calculate the percentage of the energy sugar by photosynthesis. Show your w	absorbed by the trees that is transferred to orking.	
		Answer %		(2)
	(ii)	Suggest two reasons why a large prop	ortion of the energy is not transferred to sugar.	
		1		
		2		
				(2)

		(3) (Total 9 marks)
	3	•
	2	
		•
	1	
	passed on to the secondary consumers.	
)	Give three reasons why some of the energy in the primary consumers is no	Σ

Q7. The diagram shows the annual energy flow through 1 m² of a habitat.

The unit, in each case, is kJ per m² per year.

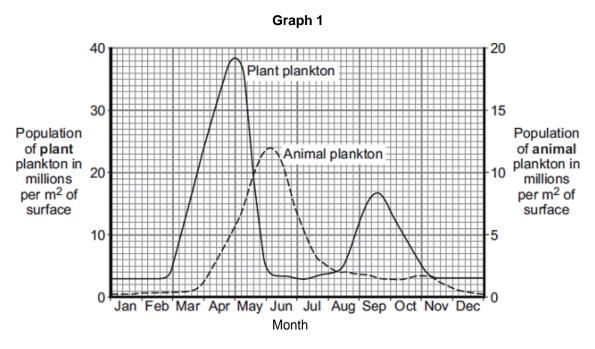

(a)	to the frog.		
	Show clearly how you work out your answer.		
	Answer %	(2)	
(b)	All of the energy the grass absorbs from the sun is eventually lost to the surroundings.		
	In what form is this energy lost?		
		(1)	
(c)	Food chains are usually not more than five organisms long.		
	Explain why.		
	To gain full marks you must use data from the diagram.		

		(2)
(d)	In this habitat microorganisms help to recycle materials.	(-)
	Explain how.	
		(3) (Total 8 marks)

Q8. Plankton live in the sea. Animal plankton eat plant plankton.

Graph 1 shows how the populations of the plankton change through the year in the seas around the UK.

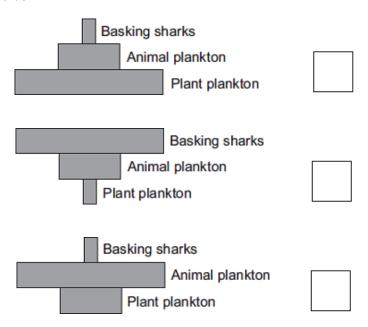

(a) Basking sharks eat animal plankton. Basking sharks grow up to 8 metres long.

Look at the diagram and **Graph 1**.

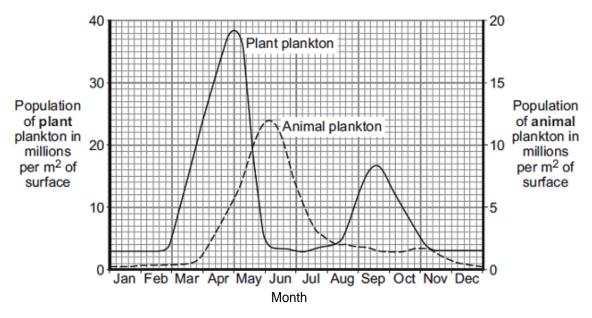

Which is the correct shape for the pyramid of biomass to show the relationship between plant plankton, animal plankton and basking sharks, in June?

Tick (✓) one box.

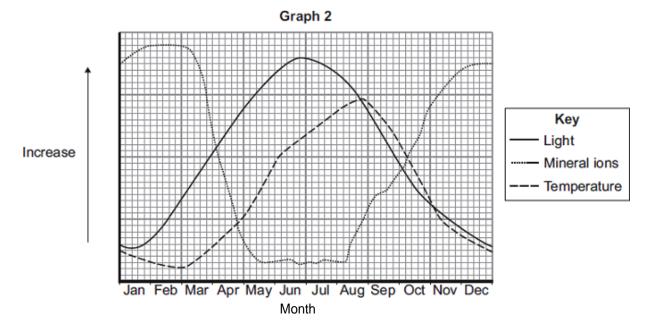

(1)

Graph 1 is repeated here to help you answer the following questions.

Graph 2 shows changes in some of the conditions in the upper layers of the sea around the UK.

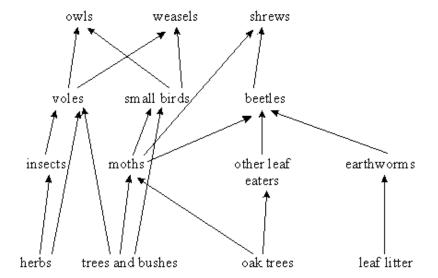

(b) The population of plant plankton increases between February and April.

Suggest **one** reason for the increase.

Explain your ar	nswer.		

(c)	The population of animal plankton changes between April and July.	
	Suggest explanations for the changes.	
		(2)
(d)	The concentration of mineral ions changes between February and December.	
	Suggest explanations for the changes.	
		(3)
		(Total 8 marks)

Q9. The diagram below shows a food web for a wood.

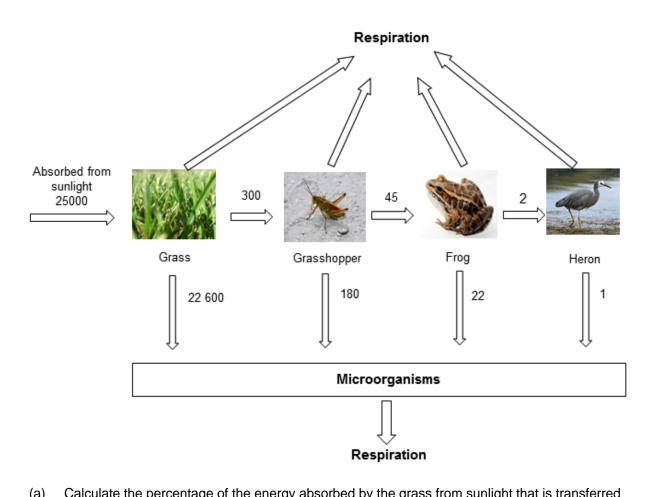

(a) The diagrams below show a pyramid of the numbers and a pyramid of the biomass for 0.1 hectare of this wood.

	Pyramid of Numbers numbers/0.1 hectare	Pyramid of Homass biomass (grams per square metre)	
	2 — 120 000 — X 150 000	1 -2 5 139	
(i)	Name one organism from the le	evel labelled X.	
			(1)
(ii)	Explain, as fully as you can, who two pyramids.	y the level labelled Y is such a different width in the	
			(3)

Q10. The diagram shows the annual energy flow through 1 m² of a habitat.

The unit, in each case, is kJ per m² per year.

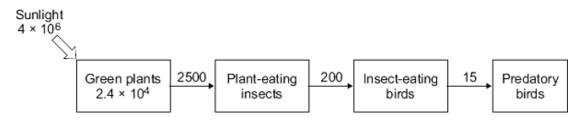

(α)	to the frog.	
	Show clearly how you work out your answer.	
	Answer %	(2)
(b)	All of the energy the grass absorbs from the sun is eventually lost to the surroundings.	(-)
(D)	All of the energy the grass absorbs from the sums eventually lost to the suffoundings.	
	In what form is this energy lost?	
		(1)
(-)	Food shains are very live at more than five arrangings land	()
(c)	Food chains are usually not more than five organisms long.	
	Explain why.	
	To gain full marks you must use data from the diagram.	

		(2)
(d)	In this habitat microorganisms help to recycle materials.	(-)
	Explain how.	
		(3) Total 8 marks)

Q11. The diagram shows the annual flow of energy through a habitat.

The figures are in kJ m⁻².

(a) (i) Calculate the percentage of the energy in sunlight that was transferred into energy in the green plants.

Show clearly how you work out your answer.				
Answer –				

(2)

	(ii)	Suggest reasons why the percentage energy transfer you calculated in part (a)(i) was so low.	
			(2)
(b)		npare the amount of energy transferred to the insect-eating birds with the amount sferred to the predatory birds.	
		gest explanations for the difference in the amount of energy transferred to the two s of bird.	
		(Total 7 mark	(3) (s)
		am shows the flow of energy through a forest. The figures are in kilojoules of energy e metre per year.	
		Trees 24 000	
(a)		at percentage of the energy in the trees is passed on as food for the carnivores? Show rly how you work out your final answer.	
		per cent	(2)

##

(b)	Give three reasons why so little of the energy in the trees is passed on to the carr	ivores.
	1	
	2

			award 2 marks for correct answer, irrespective of working or lack of it			
			award 1 mark for 62.4 ÷ 12 only with incorrect or no answer		2	
	(ii)		maller the (mass of the) bird the more energy is needed gram of body mass)			
			allow converse			
			ignore figures		1	
	(iii)	smal	ler bird has larger surface area : volume / mass ratio			
			allow converse		1	
		so he	eat / energy lost more quickly			
			allow lose more heat / energy			
			if (a)(ii) describes a trend of more energy with increasing body mass allow one mark for idea of more energy needed for flight		1	
	(b) lar	ger bird	s spend less time feeding			
			accept converse			
			allow the less energy they need per day the longer they spend feeding			
					1	
	sin	ce they	need less food per gram of body mass (to satisfy energy needs)		1	
					-	[7]
M5.	(a)	(i) \	vole/small bird/beetle			
	()	(-)	gains 1 mark			
			game : mam	1		
	(ii)		rees are large organisms; efore their biomass is large; but their numbers are small			
			each for 1 mark	3		
				3		

	(b)	pass less beca som som used som som e.g. muc by ti	rgy stored in chemicals in cells/tissues/growth; sed up food chain; energy stored at each stage in food chain/pyramid level; ause only part of energy taken in used for growth; e lost in waste; e used for repair; d to main body systems; e lost in respiration; e converted into other forms of energy; movement; h lost as heat; me detritus feeders have used remains; eturned to environment each for 1 mark	8	
		c1 -	→ animals		
			→ decomposers 2 marks for sequencing and organising the information	2	[14]
M6.		` '	levels in correct order s correct for 1 mark each		
				2	
	(b)	(i)	working 0.96% (correct answer = 2) for 1 mark each	2	
		(ii)	2 of e.g. heat up leaves absorbed by non-photosynthetic parts transmitted through leaves any 2 for 1 mark each	2	
		(iii)	3 of e.g. respiration of primary consumers movement of p.c. waste from p.c. repair/growth of p.c.; heat losses to surroundings any 3 for 1 mark each		
				3	[9]

M7. (a) 0.18 award both marks for correct answer irrespective of working if no answer or incorrect answer allow 1 mark for 45 x 100 / 25000 2 (b) heat / thermal allow heat from respiration 1 energy / mass / biomass lost / not passed on or energy / mass / biomass (c) is used **or** not enough energy / mass / biomass left ignore reference to losses via eg respiration / excretion / movement / heat 1 a sensible / appropriate use of figures including heron eg only 2 from frog / to heron ignore units 1 (d) any three from: accept marking points if candidate uses other terms for microorganisms (microorganisms) decay / decompose / digest / breakdown / rot ignore eat (breakdown) releases minerals / nutrients / ions / salts / named ignore food (microorganisms) respiration ignore other organisms respiring (microorganisms / respiration) release of carbon dioxide 3 [8] M8. (a) Basking sharks Animal plankton Plant plankton if more than one box is ticked award no mark 1 increasing / higher light / temperature (b) ignore references to months other than February – April

do not accept mineral / ions increase

1

		more / increased photosynthesis			
		for both marks there must be a reference to 'more' at least once (e.g. 'more light for photosynthesis' gains 2 marks)			
		allow 1 mark for reference to light and photosynthesis without an			
		idea of 'more'			
				1	
	(c)	increase due to increase in plant plankton / food			
		ignore references to months other than April – July			
				1	
		decrease due to fall in plant plankton / food or decrease as eaten by (basking) sharks			
		allow decrease as eaten by predators / animals / fish			
		anon decrease as eatern by production arminate, non		1	
	(d)	fall due to use / intake by <u>plant</u> (plankton)			
		ignore ref to no change section of graph			
		for fall allow March / April			
		ignore May / February		1	
		increase due to decay / decomposition / breakdown			
		for increase allow any month in range August to November			
		ignore December			
				1	
		of dead (plant / animal) plankton			
		allow of dead organisms / waste			
		anon or acad organisms / wasto		1	
					[8]
M9.		(a) (i) vole/small bird/beetle			
1415.		gains 1 mark			
		gains i mark	1		
		(ii) and trans are large arganisms.			
		(ii) oak trees are large organisms; therefore their biomass is large; but their numbers are small			
		each for 1 mark			
			3		

(b) 8 of: energy stored in chemicals in cells/tissues/growth; passed up food chain; less energy stored at each stage in food chain/pyramid level; because only part of energy taken in used for growth; some lost in waste: some used for repair; used to main body systems; some lost in respiration; some converted into other forms of energy; e.g. movement; much lost as heat; by time detritus feeders have used remains; all returned to environment each for 1 mark 8 $c1 \rightarrow animals$ $c2 \rightarrow decomposers$ 2 marks for sequencing and organising the information 2 [14] M10. (a) 0.18 award both marks for correct answer irrespective of working if no answer or incorrect answer allow 1 mark for 45 x 100 / 25000 2 heat / thermal (b) allow heat from respiration 1 energy / mass / biomass lost / not passed on or energy / mass / biomass (c) is used **or** not enough energy / mass / biomass left ignore reference to losses via eg respiration / excretion / movement / heat 1 a sensible / appropriate use of figures including heron eg only 2 from frog / to heron ignore units 1

(u) any inte non	(d)) any	three	from
-------------------------	-----	-------	-------	------

accept marking points if candidate uses other terms for microorganisms

- (microorganisms) decay / decompose / digest / breakdown / rot ignore eat
- (breakdown) releases minerals / nutrients / ions / salts / named ignore food
- (microorganisms) respiration ignore other organisms respiring
- (microorganisms / respiration) release of carbon dioxide

[8]

M11. (a) (i) $0.6 \text{ or } 6 \times 10^{-1}$

for correct answer

if no / incorrect answer $\frac{2.4 \times 10^4}{4 \times 10^6} \times 100$

or

0.006 **or** 6 x 10⁻³ gains **1** mark

2

- (ii) any **two** from:
 - reflected
 ignore some of light is green
 - not absorbed or misses chloroplasts / chlorophyll allow transmitted or passes through leaves allow hits other plant parts
 - wrong wavelength
 - photosynthesis inefficient accept other limiting factors / named
 - allow some lost through respiration / as heat (from respiration)

2

(b) energy lost via faeces / not digested / waste / excreted (of insect-eating birds)

1

energy loss via respiration / movement / muscle contraction / heat (by insect-eating bird)

accept examples of muscle contraction do **not** accept energy used for respiration

1

some of (insect eating) bird not eaten but all / most / more of insect is eaten

[7]

M12. (a) $1.67 / 1\frac{2}{3}$ accept 1.6 to 1.7

ignore working or lack of working $\frac{400 \times 100}{24000}$ for **1** mark

2

1

(b) any three from:

deduct only 1 mark for any mention of in carnivore

lost as heat or keeping body warm

lost in metabolic functions is not enough

lost in respiration

do **not** accept '<u>used for</u> respiration

movement

not eaten parts or individuals / non-edible parts / dead leaves / wood / bones / faeces / urine

ignore 'waste'

ignore references to growth / reproduction

3

[5]
